

Century Financials *M-Series*

Explore. Expand. Excel...

"Our **Powerful** Solutions will move you to a new level."

Century Financials *M-Series*, a complete suite of Financial Management Modules provides value-added advantage that capitalises your decision-making process. It uses the same technology that drives the internet making it scalable and accessible and is adaptable to the platform requirements – be it **Unix, Linux, Windows XP, Windows 2000/2003** or **Mac**. With our implementation expertise, adding a new branch or cost centre is easy and hassle-free with **Century Financials M-Series**.

With the advantage of Web technology, *M-Series* application integrates seamlessly with your existing web presence. It starts from the web browser user interface with its configurable Key Performance Indicators (KPIs), to On-Line Training and Documentation, Customer Portal and Web Services. Users can access anytime, anywhere and can even log in a purchase through the internet.

Century Financials offers 24 x 7 global access to customers and suppliers. Business partners are able to check on account status and current financial position with complete open item enquiry. This will provide a competitive and convenience of working in this challenging environment towards setting up satellite offices.

Using our workflow engine, e-Flow, purchase approvals are sent automatically via email to authorised users. With a click of a button, authorised users can access the information from anywhere in the world and post an approval.

M-Series with its friendly icons provides new and present users easy usage of personalised user defined viewing options, compared to conventional Function Key Options.

The *M-Series* also provides users with Excel Plug-ins capability that helps managers and accountants to look up to tables and columns to produce their own reports. It also provides Interface tool within all the key processes to integrate to other external systems and desktop

THE FEATURES

banking. This can be achieved by using the supplied interfacing API's or XML.

It all Adds Up.

"Where you want to be **tomorrow** determines where you should be **today**."

Some of the key and salient features which have always been appreciated by our present customers are:-

- ♦ **Navigation** options where users can drill down to the source transactions from multiple dimensions. It provides the navigation across the systems and the modules with no limitation.
- ♦ **Transaction History** can be kept for any number of periods and years within all modules. Past history can be used in reports and enquired upon at transaction level.
- ♦ **Multiple Printing Options** such as downloading reports to Excel, PDF, and Browser are few of the many options available for users to view the records. Users can send reports to mail, spooler, screen preview, files etc. for easy viewing and analysis.
- ♦ **Online Training Material, User Manuals, Technical Bulletins** are some of the documentations that can be viewed online. Technical Bulletins provides the latest up to date product enhancements. Users can also create their own notes and procedures within the system at each level of processes.
- ♦ **All the menus and screens are user define.** Users can use these options to display/ not to display the menus based on their necessity. The system also provides multi level security at the menu, screens, processes, segments of codes and banks.
- ♦ **Very Limited Fields?** The system has attribute function that allows users to add in user define fields according to their business needs.
- ♦ **Notes & Attachments.** Notes types and attachments capabilities where supporting documents can be attached to the respective programs such as attaching quotations, extracts of minutes of meetings to the respective purchase orders.
- ♦ **Procedures.** Procedures such as User or System Operating Procedures can be built within the system at the respective function.
- ♦ **CARP (Century Application Report Processor).** Replaces the traditional method of predefined document formats. Payment Voucher, Receipt, Purchase Order, Statements of Accounts and other documents can be printed with logos, watermarks, enhanced fonts and features producing high quality documents.
